

Fast and accessible conflict management from the world's leading conflict tool

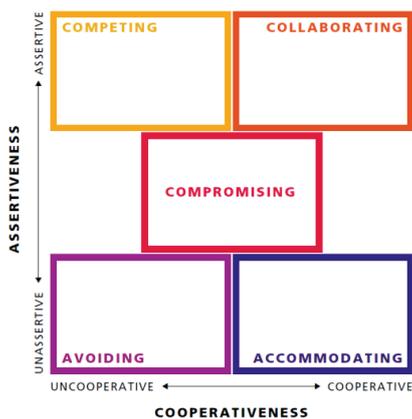

The TKI (Thomas–Kilmann Conflict Mode Instrument) is the world's bestselling assessment for understanding how different conflict-handling styles affect interpersonal and group dynamics.

Conflict, whether it is overtly confrontational or simmering under the surface, is an ever-present force in the workplace. 85% of employees across Europe say that they deal with some form of conflict on a daily basis, and the average employee spends 2.1 hours a week dealing with it. For the UK alone, that translates to 370 million working days lost every year as a result of conflict.*

Using the TKI reduces wasted time and prevents the damage to working relationships caused by conflict. Fast and accessible, it gives you access to immediate, actionable strategies, with no prior knowledge or training, and this can prevent conflict from escalating into something more serious.

The TKI measures five simple conflict-handling modes, and shows how each of them can be used in different situations to get the most efficient
